HF-4760(BL3) is a blow molding grade resin with high density polyethylene with 1-Butene as co monomer which is manufactured by the suspension polymerization of ethylene monomer. Stiffness, good ESCR are its special properties. High rigidity and good flowability which made it proper for usage in bottles and small blow molding goods.

**Density:** 0.954  
**MFI:** 23±4

**Features**
- High density and Stiffness, good flowability and impact Strength and good Stress Cracking resistance.

**Applications**
- Small blow molding Bottles
- Containers (up to 5 ltr.)
- Packing of pharmaceuticals & surfactants

**Additives**
- Antioxidant/Process stabilizer
- Lubricant/acid scavenger

### Material properties
(This data are typical values and are not to be construed as product specifications.)

**Handelling and Health Safety**

Molten polymers could be injured skin or eye so safety glasses and appropriate gloves are suggested to prevent possible thermal injuries. Also appropriate ventilation is suggested in working with melt polymer.

Accumulation of fines or dust particles that are in this grade is not suitable because of explosion hazard probability. So adequate filters and grounding exists at all time are recommended.

**Storage**

Polyethylene products (in pelletised or powder form) should not be stored in direct sunshine and/or heat radiation. Ultraviolet cause a change in the material properties. The Storage area should be dry and preferably don’t exceed 50 °C. Under cool, dry, dark conditions Jam Polymers Polyolefin resins are expected to maintain the original material and processing properties for at least 18 month. JPC would not responsible about quality diminishing such as color change, bad smell or ets which caused by bad storage conditions. It is better to process PE resin within 6 months after delivery.

**packaging**

Jam Polymers Polyolefin resins are supplied in pellet form packed in 25kg bags. Alternative packaging modes are available for selected grades.

---

Shear-Viscosity @ 190 °C

- On compression molded according to ASTM D1928C
- Processing Conditions
- Recommended barrel temperatures range between 190 °C and 280 °C.

**The above values were**

Calculated from data for 100 µm produced on a 75mm Barnage extruder with 190 °C melt temperature using a 2:1 blow ratio and a gap die of 3.0 mm.
